2. BRIEF DESCRIPTION OF JOB DUTIES:

Research: Dr. James J. Zhang is a member of the sport management faculty in the Department of Kinesiology and Mary Frances Early College of Education at the University of Georgia (UGA). Sport is one of the fastest growing industries in North America. Its annual business transactions amount to over \$900 billion with an average of over 5.0% annual increase in recent years, ranking it among the top 15 of America's largest industries. As a societal institution, sport has become a dominant influence in the American society. Its entrance into mainstream business is evidenced by increased media attention and appearance in political platforms. Dr. Zhang's primary research interests are applied measurement and/or applied studies examining sport consumer and organizational behaviors. Adopting an integrated approach, the following perspectives have been investigated for the purpose of predicting sport consumption behaviors and formulating effective marketing strategies: (a) market demand and competition, (b) socio-motivation, (c) event/program operations and service quality, (d) consumer lifestyle, and (e) sociodemographic backgrounds. He has also studied sport leadership with a focus on formal and informal leadership associated with athletic program management. Classical and contemporary leadership theories, such as trait, behavioral, contingency, and transformation, are often used as research frameworks. Between 2003 and 2011, he served as the principal investigator and the executive director of the 21st Century Community Learning Centers (CCLC) Leadership Project that was funded by the United States Department of Education through the Florida Department of Education. The primary purpose of this Leadership Project was to provide effective leadership to after school programs through integrated scientific inquiry (program evaluation), organizational implementation (policy and compliance), and practical enhancement (technical training and assistance) procedures. The path-goal leadership theory was the primary framework that guided the project's design and conduct. In recent years, he has worked on various research projects, some of which are related to sport marketing that are funded by international organizations. In addition to his primary research interests is his willingness and ability to contribute to faculty and student research in other academic areas, mainly in the management of health and exercise programs, by using his knowledge and skills in research design, measurement, data analyses, research report formulation, and management and marketing theories.

Teaching: Dr. Zhang began his academic career at the University of Houston (UH) in 1993, where he was a postdoctoral scholar for one year and a faculty member for seven years. While at the UH, his average teaching responsibilities were usually three 3-credit-hour courses per semester during the fall and spring semesters and two 3-credit-hour courses during summer sessions at both graduate and undergraduate levels. He taught a total of nine different courses in sport management, research design, and measurement theories. Additionally, each semester he advised approximately 20 graduate and undergraduate students majoring in sport management or measurement. He also served as the sport management program internship coordinator placing and supervising 12-15 student interns per semester. During his seven years as a faculty member at the UH, he served on a total of 25 dissertation committees, three of them as committee chair; 19 doctoral candidacy research (mini-dissertation) committees, four of them as committee chair; and nine thesis committees, two of them as the committee chair. He also served as an adjunct faculty member in the College of Pharmacy at the UH, where he taught research design and biostatistics courses to doctoral students majoring in pharmacology. He was tenured and promoted to associate professor in 2000. Dr. Zhang was recruited to work at the University of Florida (UF) in 2001, where his teaching responsibilities included two courses in both the fall and spring semesters, and one course during the summer session. He taught a total of six different courses in sport management and one course in research methods. Each semester, he supervised 5-7 student interns in sport management. From 2001 to 2011, he served as the major advisor to over 160 graduate students and also served on numerous master students' advisory committees. Dr. Zhang was also instrumental in the revision and improvement of the master's degree curriculum and he was the leader in formulating the proposal for a new Ph.D. program with a concentration in sport management, which was approved by the UF Graduate Studies Council in 2002. Starting in the fall semester of 2011, Dr. Zhang has been a tenured faculty member at the UGA. Similar to his teaching duties at the UF, his primary responsibilities at the UGA include teaching graduate and undergraduate courses in the sport management program, advising students, contributing to curriculum development and improvement, and taking a leadership role in establishing an international center for sport management education and research that serves the greater UGA academic community.

Service: Over the eight-year period at the UH, Dr. Zhang served as the chair, or as a member, of 16 committees at the departmental level, including chairing the Graduate Studies Committee and the Computing Committee, serving as a member of the Promotion and Tenure committee and the Faculty Search Committees, and coordinating the department Research Colloquium and international admissions. At the college level, he served as a member of eight committees, including the Research Advisory Committee and the Salary Committee. At the university level, he served as a member of the Academic Counseling for Athletics Committee and the Human Subjects Review Committee. He also served as a member of the UH Excel Program. At the UF, Dr. Zhang served as the Interim Chair of the Department of Tourism, Recreation and Sport

Management during the 2007-2008 academic year. Prior to that, he served as the coordinator of the sport management program for one academic year. The program usually had an enrollment of over 400 undergraduate students and 80 graduate students. Departmental committees on which Dr. Zhang served as the chairperson or a member included the Tenure and Promotion Criteria Committee, the Sport Management Faculty Search Committees, the Stevens Visiting Professor Committee, the Diversity Committee, the Promotion and Tenure Committee, the Outstanding Thesis/Dissertation of the Year Committee, the Graduate Studies Committee, and the Department Chair Search Committee. He chaired or served on numerous college committees, such as the Tenure and Promotion Committee, Faculty Advisory Committee, the Diversity Committee, and the College Council of Principal Investigators. He was a member of the University Scholar's Review Committee and the College of Health and Human Performance Dean Search Committee. At the UGA, Dr. Zhang was appointed as the coordinator of the sport management program for 10 years to take a leadership role in activities associated with program development, curriculum revision, community outreach, and international relations. He has also been elected to serve as the Director of the International Center for Sport Management (ICSM). Dr. Zhang is currently the Editor of the *International Journal of Sport Marketing and Sponsorship* and Sport Management Section Editor for the *Measurement in Physical Education and Exercise Science* journal, has served on the editorial boards for over 10 scholarly journals, has reviewed research manuscripts for many other journals and textbook publishers, has served as review section chair or member of several national and international conferences, and has reviewed internal and external grants. He has served as a leader or contributor on many committees in national or international associations, including the North American Society for Sport Management (NASSM), the World Association for Sport Management (WASM), and the National Academy of Kinesiology (NAK), and the International Chinese Society for Physical Activities and Health (ICSPAH). For his outstanding leadership contributions, in 2008 Dr. Zhang was presented an Honor Award by the International Olympic Committee (IOC) for voluntarily serving as an assistant manager at a basketball venue during the Beijing Olympic Games. He received a service award from the Association of Collegiate Marketing Educators in 2008, an acknowledgement award from the Southern District AAHPERD in 2011, and the Richard Reiff Internationalization Award from the University of Georgia in 2019. Most significantly, in 2014 Dr. Zhang was appointed as an Honorary Dean of the College of Sport Economics and Management by Shanghai University of Sport, and he is very proud of his scholarly activities at the Shanghai University of Sport, a precious opportunity for him to serve his motherland that he has left behind 36 years ago.

8. TEACHING, ADVISING AND/OR INSTRUCTIONAL ACCOMPLISHMENTS

It is my belief that as a faculty member, my fundamental responsibilities are to teach and to generate positive change in student learning. I generally teach two to three courses per semester, at both graduate and undergraduate levels. I have been able to do a good job in the classroom through well-organized preparation, logical structure, commitment, dedication, and hard work. All of my courses require homework assignments, research papers, and/or presentations. With a focus of informing students with up-to-date knowledge and improving their problem-solving abilities, I regularly disseminate new research findings from research publications of others and mine. I often receive positive comments about my teaching from my students and alumni. When I was at the UH, my teaching evaluations by students were ranked among the highest in the department according to my department chair. In 1998, I received the Teacher of the Year award from the College of Education at the UH. At the UF, my teaching evaluations were at or above the department and college mean scores, and received the International Educator of the Year Award from the College of Health and Human Performance.

I believe that quality teaching goes beyond classroom instruction. I have tried to make myself available to students beyond office hours, particularly for research and statistics-related courses and activities that generally require a lot of tutoring. In 1994, I received the student-athlete teaching award for supporting student athletes in their academics at the UH. I have also made many efforts to develop and update course syllabi for all courses that I teach. I was able to make significant contributions to the revision and establishment of academic programs/curriculum at UH, UF, and UGA. At the UH, I played a major role in the establishment of the master's program in sport management and the Ph.D. program in kinesiology. Likewise, I was the primary person responsible for the establishment of the new Ph.D. sport management program at the UF. My colleagues in sport management and I revised and improved the sport management master's program curriculum at the UF. Although internship supervision was not counted into my workload at the UH, I served as the primary person responsible for the initiation, development, and maintenance of a strong sport administration internship program there. Within each semester, I usually placed and supervised 10-15 interns. At the UF, I was able to develop new internship sites through personal visits and media communications. Many of our students majoring in sport administration gained employment from the organizations where they completed their internship. I observed tremendous student achievements through their internships at various sport organizations. It is my strong intention to carry out the same philosophy and actions to support students here at UGA and I have led the efforts to lead the renovation of the curriculum at all three degree levels.

I also believe that research experience is the most critical element discriminating a graduate program from undergraduate studies. Besides emphasizing this element in my lectures, I have had many students involved in my research projects. For instance, I have published and presented together with many of my students, alumni, visiting scholars, post-doctoral scholars, and colleagues. I have been able to build a good 'teamwork culture' with my students, and many of them still maintain a close working relationship with me after they graduate. I have also been able to contribute to students' research experience by serving on many doctoral dissertation, doctoral candidacy paper, and master's thesis committees as a chairperson or as a member. As a faculty member with expertise in research, measurement, and statistics, I often spend more time with a student than the average committee member, which is very demanding time-wise, yet enjoyable. Four of my doctoral students were the runner-up selections for the graduate student research award at recent North American Society for Sport Management (NASSM) Conferences. So far, all of my former doctoral students have at least had their dissertations published in reputable journals although some have published more research studies. All of my current doctoral students are expected, with assistance from me, to publish four or more research manuscripts before finishing their Ph.D. programs. To date, my students and I have been able to materialize this expectation. Many of my advisees have won departmental, college, university, and/or national student awards for excellence in academics, leadership, and/or community service. Additionally, I have successfully nominated students to serve as officers in national and state academic associations. Overall, I have enjoyed my teaching experience very much. Seeing my students and being able to develop professional relationships with them definitely enhance each day of my life. I will continue to pursue quality teaching and improve my knowledge and skills to enhance student learning, particularly in the area of students' independent research abilities.

Over the years, I have received a number of recognitions for my outstanding teaching performance and supporting students' professional developments. At UH, I received the National Student-Athlete Day Teacher Award presented by the Athletic Department in 1993 and the Teaching Excellence Award presented by the College of Education in 1998. At UF, I was the recipient of the International Educator of the Year Award in 2009 and the Doctoral Dissertation Advisor/Mentoring Award in 2011, both of which were granted by the College of Health and Human Performance. I was also appointed as the Eminent Mentor Scholar of the College of Education and Human Services at Cleveland State University in 2004-2007. At UGA, I have received the Career Center Recognitions for numerous times.

12. RESEARCH NARRATIVE

In prestigious research institutions like the UGA, UF, and UH, scholarly work is definitely the focal point of the academic process. Although I have been quite committed to teaching responsibilities, I have not overlooked my responsibilities to conduct research. I have and will continue to commit to scholarship.

My primary research interest is to use my research skills and sport management background to conduct applied measurement studies and/or applied studies in sport management, mainly focusing on sport consumer and organizational behavior issues. This focus has been based on the following considerations:

1. The academic program of sport management has been one of the fastest growing disciplines in the past 25 years, compared to other areas in the field of exercise and sport sciences and even beyond. This is evidenced by the increased number of academic programs at both undergraduate and graduate levels across the nation, increased faculty positions that are advertised, increased student enrollment, and increased job placement of sport management majors. The development and progress of the sport management program at the UGA are consistent with the contemporary trend. Such dramatic increases may have been partially due to the overall growth of the sport and leisure industry and the need for qualified personnel who are equipped with knowledge and skills in both human performance and business administration.
2. The accumulation and growth of knowledge for the sport management discipline have not been able to keep up with the development and demand of the field. Theory development and research conduct have generally lagged behind.

Historically, many of the theories in sport management have been formulated by practitioners based on their professional experiences and personal insights, which often lack scientific evidence and hence require scientific confirmations.

3. Research inquiries in sport management have been predominantly qualitative and documentary, inadequately following research principles and up-to-date methodologies. For example, in the current sport management literature, measurement scales have seldom been considered/tested for their measurement properties using contemporary scale development procedures. Because of the overall weaker quality of research papers in this discipline, the umbrella research journal in exercise and sport sciences (i.e., *Research Quarterly for Exercise and Sport*) has not made a section for sport management studies.
4. For sport organizations, the key to achieving organizational objectives consists of being more effective than competitors in integrating marketing activities toward determining and satisfying the needs and wants of target markets. Sport organizations are generally market-driven. Understanding the cause and channel of sport consumer behaviors is the fundamental process for designing and implementing activities for the production, pricing, promotion, and distribution of a sport product to satisfy the needs or desires of consumers and to achieve the organizational objectives. In the meanwhile, the management process within a sport organization is also essential for the effective planning, organizing, leading, and controlling of financial and human resources in order to achieve organization's internal (growth and job satisfaction) and external (quality product and service) objectives. Quality leadership coordinates the organization and its members, and assists an organization to move more rapidly and successfully toward its objectives.
5. The rich environment for sport management research in the community has provided me with endless opportunities, such as professional sport teams, park and recreation departments, government agencies, intercollegiate and interscholastic sports, youth sports, and health-fitness clubs.
6. I have the necessary skills and background to conduct studies in issues related to consumer and organizational behaviors. Additionally, most of my investigations are big scale studies requiring immense time commitments and efforts. I have the skills to build different 'research teams' for various projects. Certainly, I enjoy teamwork and I believe that two or more people are smarter than one, at least most of the time.

Adopting an integrated approach, I have investigated the following perspectives for the purpose of predicting sport consumption behaviors and formulating effective marketing strategies: (a) market demand and competition, (b) socio-motivation, (c) program operation and service quality, (d) consumer lifestyle, and (e) sociodemographic backgrounds. I have studied sport organizational behaviors with a focus on formal and informal leadership associated with sport team management and athletic administration. Classical and contemporary leadership theories, such as trait, behavioral, contingency, and transformation, are often used as research frameworks. Utilizing my research and leadership knowledge, I completed the 21st CCLC Leadership Project that was funded by the United States Department of Education through the Florida Department of Education. The primary purpose of this Project was to provide effective leadership to after school programs through integrated scientific inquiry (program evaluation), organizational implementation (policy and compliance), and practical enhancement (technical training and assistance) procedures. The path-goal leadership theory was the primary framework that guided the project's design and conduct. The Star Leadership Model (SLM) and a strategic plan were developed to guide the operation of the Leadership Project. A general plan was formed to direct and coordinate the implementation of the SLM and its elements in order for the Leadership Project to work closely with all of the 21st CCLC programs with over 400 program sites serving over 100,000 students and their family members.

These research activities have strengthened the academic and professional relationships between the sport management program and community organizations. Many of my students have been employed or admitted as an intern in these community organizations. Research findings of these projects have been used in graduate and undergraduate class instruction as cutting-edge information and first-hand material. Numerous students have been involved in these research activities, as well as presented and published with me from the collected data, enhancing their research and problem-solving skills. As the graduate sport management program grows rapidly at the UGA, it is critical to use research activities to enhance the research and problem-solving abilities of graduate students. Together with my colleagues and students, we have used the collected information to publish in all related sport management journals that currently exist in North America and made presentations at all major conferences in the field. Our work has contributed to theory development in the field of sport management. Additionally, these published papers have frequently been cited in research papers and requested for reprints by scholars worldwide. Besides scholarly publications and presentations, my research findings have been presented to community organizations to enhance their functions and services to the community. For example, the research findings of the Leadership Projects have been used by the State of Florida as evidence for providing on-going funding to after school programs. I vividly remember when attending an international conference in 1994, sport consumer studies did not exist then. My presentation on consumer behaviors was only one of a very few on the issue. During my recent attendance to the same conference, I noticed

that over 60% of the programs were focused on sport consumer behaviors. I firmly believe that our work has just begun. The best is yet to come.

Research universities, such as UGA, UF, and UH, have a high expectation for research funding through contracts and grants. My research interests, knowledge, and skills have successfully aided me to obtain internal and external research funding. My academic background in sport consumer and organizational behavior studies, research design, and statistical analyses have helped me obtain numerous research grants, contracts, and/or consulting activities from various sport and non-sport organizations. The 21st CCLC Leadership Project began in 2003 and ended its first five-year funding cycle in 2008, with a total funding of around \$7.5 million. Efforts were made for the Project to be funded for another three-year funding cycle, which started in 2008 and ended in 2011, with another funding budget of approximately \$5 million. It is necessary to note that this funded project was consistent with the UF research strategic plan on helping family, children, and community. I have also been successful in obtaining funding from a number of other organizations as a principal investigator or a co-investigator. At UGA, I obtained funding from the Georgia Department of Education to conduct general evaluations of 21st CCLC afterschool programs throughout the state.

Collaboration with others, as the secondary author, generally account for one third of my publications and presentations. For many years, I have set a goal for myself, which is to write a manuscript of my own when I finish one with others. It brings me great joy to work with other people and to be able to assist colleagues, students, alumni, and friends. Due to program needs at UGA and UF, I have devoted more time to directing doctoral student research since I was promoted to full professor at UF in 2006. Doing so is of a planned behavior to equip my doctoral students with stronger research competence, better research records, and more competitiveness for employment positions. Most of my doctoral students conduct studies in the areas of my research interests, and their studies continue to advance theories and practices identified in my previous studies. My secondary research interest is to contribute to faculty and student research in other academic areas, mainly in the management of health and exercise programs, by using my knowledge and skills in research design, measurement, data analyses, research report formulation, and management theories.

Over the years, I have received a number of recognitions for my research accomplishments. At the UH, I received the College of Education Research Award twice (1996, 1999). I was inducted as a Fellow by the Research Consortium of the American Alliance for Health, Physical Education, Recreation, and Dance (AAHPERD). I received the Scholar Award of the Southern District Association for Health, Physical Education, Recreation and Dance (SDAHPERD) in 2005, and the Measurement and Evaluation Council Honor Award of AAHPERD in 2006, which is the highest award of the council. I was inducted as a Research Fellow by the North American Society for Sport Management (NASSM) in 2007. In 2007, I also received the University of Florida Research Foundation Professorship Award, one of the highest recognitions for scholarship excellence at UF. In 2009, the AAHPERD named me the J. B. Nash Scholar. In 2011, I was named the 'Sport Professional of the Year' by the SDAHPERD and received the Doctoral Dissertation Advisor/Mentoring Award from the College of Health and Human Performance at the UF. Most recently, I am the recipient of the Earle F. Zeigler Lecture Award in 2014, the highest scholarly honor granted by the NASSM, and was inducted as a Fellow of the National Academy of Kinesiology a few years ago. These honors will only inspire me to continue improving my knowledge and skills in an effort to make greater scholarly and professional contributions.
